

# 2 MAIN FEATURES

# 1. Replication:

- ▶ Process of storing data in one site.
- ▶ It is about simply copying data from a database from one server to another.
- ▶ It is useful in improving the availability of data.
- ▶ The result is a distributed database where the users can access data relevant to their tasks without interfering with the work of others.

## 2. High Scalability:

- ▶ Capability of a system or a network to handle a growing amount of work
- ▶ Accommodates upto hundreds of terabytes of data
- ▶ Automatically handles sharding and replication
